Summary

Backend Developer (Node.js/TypeScript) with production experience on serverless, high-concurrency systems on AWS. Strong in NestJS/Express, Redis, queues (SQS, BullMQ), DDD and Hexagonal Architecture, owning delivery from system design to CI/CD and testing. Former Tech Lead – Top 30 UniVentures 2025.

Technical Skills

Backend: NestJS, Express.js, Node.js, TypeScript, WebSocket
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Drizzle ORM
Messaging & Background Jobs: AWS SQS, BullMQ, Webhooks, MQTT
Cloud & DevOps: AWS (Lambda, S3, SQS, CloudFront, EC2), Docker, GitLab CI/CD
Architecture & Patterns: Hexagonal, DDD; Singleton, Strategy, Factory, Observer
AI Integration: LLM tool-calling (MCP), Hybrid RAG (BM25 + pgvector)
Tools & OS: Alibaba KMS, MinIO, LocalStack, Arch Linux, NixOS
Frontend: ReactJS, Redux, NextJS, Sass, TailwindCSS

Experience

Nexon Dev Vina

February 2026 – Present

Backend – Junior

Tech stack: NestJS, TypeScript, AWS Lambda, S3, SQS, CloudFront, MySQL, DDD, Hexagonal Architecture

- Designed and developed core APIs for the Admin CMS and web platform powering official websites for Nexon's flagship game titles; collaborated directly with Headquarters (HQ) teams to ship V1 to production.
- Redesigned the static-site build pipeline into parallelized, queue-based processing (Lambda + SQS + S3), cutting build time by 80%; refactored legacy modules with DDD/Hexagonal Architecture.
- Contributed to migrating the platform from single-region to a multi-region, multi-lingual (i18n) architecture to support low-latency global access.
- Participated in the end-to-end deployment lifecycle across Dev, Stage, Pre, and Live environments.

DXDLabs

August 2025 – February 2026

Backend – Fresher

Tech stack: Express.js, TypeScript, Redis, PostgreSQL, Alibaba KMS, PayPal, BullMQ, Docker Compose, MinIO

- Built mission-critical payment (PayPal) and digital-signing (Alibaba KMS) engines; optimized high-concurrency signing workflows with Redis caching and BullMQ background jobs.
- Established CI/CD pipelines with Docker Compose and built the unit-testing suite from scratch, achieving 90% code coverage.

Personal Projects

UniVentures 2025 – Stockie: Trading Simulator

October 2025 – January 2026

Tech Leader

Tech stack: Express.js, Python, Redis, VNStock, Docker Compose, PM2, AWS EC2, LLM, MCP

- Built a stock-trading simulator: Express.js/Redis backend, Python service syncing live Vietnam stock-market data (VNStock), trading mechanics, and RBAC authorization.
- Led technical delivery for a cross-university team (RMIT, UIT) – task delegation, API documentation, code review – with automated CI/CD to AWS EC2. Demo: univen-2025.trancondev.site

Smart Garage – AIoT Vehicle Positioning System (Graduation Thesis)

2025 – 2026

Solo Developer

Tech stack: NestJS, MQTT, Redis, PostgreSQL (pgvector), SSE, Drizzle ORM, Docker, ESP32/UWB firmware

- Built a real-time indoor positioning backend: MQTT ingestion from UWB sensors, trilateration with One-Euro filtering, and Redis-backed SSE streaming to mobile and web clients.
- Developed an AI assistant with hybrid RAG (BM25 + pgvector) and LLM tool-calling (MCP), reaching 100% accuracy on a 101-question benchmark.

Education

Vinh Long University of Technology and Education (VLUTE)

2022 – 2026

Major: IoT – Internet of Things

GPA: 3.7/4.0

Honors & Awards

- Top 30 Finalist (Top 2% of 1,500+) & Demo Day Presenter** – UniVentures 2025 (BLOCK71, Temasek, Google, IBM, NIC).
- Top 2 Finalist (AI Track)** – Cardano SEA Hackathon 2026 (backend architecture, LLM/MCP integration).
- Fourth Prize** – Vietnam National Science and Engineering Fair (ViSEF), field of System Software.
