

Profile

Final-year Chemical Engineering Technology student at Industrial University of Ho Chi Minh City (IUH), focused on organic chemistry. Interned at Son Hai Van Paint Co., Ltd., operating coating film test instruments and running IQC — IPQC — FQC quality control across 400–500 kg industrial batches under an ISO 9001:2015 system. Currently completing a thesis on leather-like composite materials from water hyacinth. Seeking a QA/QC or R&D position in paint, coatings, materials or industrial chemicals.

Technical Skills

Instruments operated: Stormer viscometer (KU), Pfund Cryptometer, Hegman fineness gauge, density cup, gloss meter, adhesion tester

Exposure to: Salt spray chamber (ISO 7253), QUV weathering, Elcometer mandrel bend, impact tester

Quality systems: ISO 9001:2015, IQC/IPQC/FQC workflow, SOPs, 5S, navigating TCVN — ASTM — ISO

Test standards: TCVN 2099/ISO 1519, TCVN 2100-2/ISO 6272-2, ISO 4628-2, ASTM D1654

Materials: Alkyd, acrylic, epoxy, polyurethane and polyester resins; solvent systems; pigments and extenders; natural-fibre composites

Health, safety & environment: MSDS/SDS, PPE, fire safety, hazardous waste segregation and handling

Software: AutoCAD Plant 3D, Excel, Word

Experience

Son Hai Van Paint Co., Ltd. — Technical Department

April 2026 — June 2026

QA/QC Intern — Supervisor: Le Quoc Thoi, Technical Manager

Instruments & standards: Stormer (KU), Pfund Cryptometer, Hegman gauge, density cup, gloss meter 20°/60°/85°, adhesion tester; ISO 9001:2015

- Ran IQC — IPQC — FQC sampling and inspection on 400–500 kg industrial batches, operating the full coating film test bench and judging pass/fail against technical tolerances (density $1.25 \pm 0.02 \text{ g/cm}^3$, alkyd primer $\sim 70 \text{ KU}$) at a controlled $25 \pm 0.5^\circ \text{C}$; recorded results on standardised ISO 9001:2015 forms.
- Prepared and rated specimens for durability testing (QUV, mandrel bend, impact, 1000 h salt spray), matched colour against customer standards, and learned root-cause tracing on out-of-spec batches — resin shock, pigment flocculation, off-target viscosity — to recover a batch rather than scrap it.

Research & Projects

Graduation Thesis — Leather-like composites from water hyacinth

2026

Principal investigator — Supervisor: Dr. Pham Thi Hong Phuong

Instruments & standards: Natural-fibre composites, water hyacinth, agricultural by-products, garment waste paper

- Investigating the process factors governing leather-like material made from water hyacinth, agricultural by-products and waste paper from garment embroidery.
- Aimed at valorising waste streams into an environmentally friendlier substitute for synthetic leather.

Industrial Internship Report — Paint Manufacturing Process

2026

Team of 8 students — Supervisor: Le Nhat Thong, M.Sc.

- Documented the complete paint manufacturing process — raw materials, block flow diagram, equipment, common failures and corrective measures — and compiled 12 quality tests with their principles, apparatus, governing standards and step-by-step procedures.

Education

Industrial University of Ho Chi Minh City (IUH)

2022 — 2026

B.Eng. in Chemical Engineering Technology — Faculty of Chemical Engineering

GPA: 2.9/4.0

- Certificate in Basic Information Technology Application (IUH).

Awards

- **Second and Third Prize** — Provincial Science & Engineering Fair (social media category), high school.
- **National Consolation Prize** — *Safe Traffic for a Smiling Tomorrow* competition.
- **Provincial Consolation Prize** — Reading Culture competition.
- **Second Prize** — Provincial Chess Championship, high school.
